

VOCORD SDK

SDK for Integration with VOCORD Phobos Software

VOCORD SDK is designed for integration of multichannel digital audio/video recording system VOCORD Phobos series 2.* with applications of other developers.

VOCORD SDK includes the following:

- 1.ActiveX components for monitoring channels and receiving data recorded by VOCORD Phobos System.
- 2.ActiveX components for reporting events registered by VOCORD Phobos System.
- 3.ActiveX components for managing recording functions and settings of VOCORD Phobos System.
- 4.Description of the structure of the database containing record attributes and system settings.

VOCORD SDK allows VOCORD Phobos System to be easily integrated in the existing informational infrastructure of the company, for instance, in the call centers' informational system, digital video surveillance systems and integrated object security systems.

SDK for Developing a Computer Telephony Application

For developers of computer and IP telephony applications the company offers a package including the following:

- Computer-telephone integration (CTI) boards.
- Board drivers for Windows 2000/ XP/ 2003.
- Scripting Engine (for running applications written in JavaScript).
- Examples of existing applications.
